

Full mounting panel

The **6500 MXM mounting panel** is installed inside a Mtrx cabinet. They are made of 11 GA of galvanized steel. The 6500 MXM consists of the mounting panel, mounting brackets and all installation hardware. Mounting channels are bolted to the bottom of the cabinet to support the inner panel

during its installation. This facilitates assembly and allows one or multiple panels to be installed at any depth. All inner panels are supplied standard with a pair of mid-section support brackets (two pairs for 1600mm and 1800mm wide panels). These brackets fasten directly to

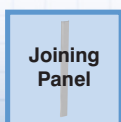

the frame, for panels in their default full back position. For panels installed at other depths, optional grid railing is available to install the support brackets. Standard finish is unpainted 11 GA galvanized steel. Can be provided painted white.
